COMPANY & CURRENT COMPANY PRODUCT ANALYSIS

COMPANY PROFILE

The story began in 1971, when a roaster and retailer of whole bean and ground coffee, tea and spices operated a single store in Seattle's Pike Place Market. Today, Starbucks connects with millions of customers every day in more than 80 markets.

Folklore

Starbucks is named after the first mate in Herman Melville's "Moby-Dick." The logo is also inspired by the sea – featuring a twin-tailed siren from Greek mythology.

Mission

To inspire and nurture the human spirit – one person, one cup and one neighbourhood at a time.

Starbucks Coffee

Starbucks has always believed in serving the finest coffee possible. It's the company's goal for all its coffee to be grown under the highest standards of quality, using ethical sourcing practices. The coffee buyers personally travel to coffee farms in Latin America, Africa and Asia to select high-quality Arabica beans. The master roasters bring out the balance and rich flavour of the beans through the signature Starbucks® Roast.

Stores

The coffee chain's stores are a neighbourhood gathering place for friends and family. Customers enjoy quality service, an inviting atmosphere and an exceptional beverage in these stores as well as immersive Starbucks Reserve® Roastery locations in Chicago, Milan, New York, Seattle, Shanghai and Tokyo. Apart from these, Starbucks has 36,000+ Stores in 84 different countries.

Partners

The employees, referred to as partners, are at the heart of the Starbucks Experience. The company offers comprehensive health coverage for eligible full- and part-time partners, equity in the company through Bean Stock, and the opportunity for eligible U.S. partners to earn bachelor's degrees with full tuition reimbursement through the Starbucks College Achievement Plan.

COMPANY PRODUCTS AND BRAND STRATEGY

Products

Starbucks offers a range of exceptional products that customers enjoy in its stores, at home, and on-the-go.

- **Coffee:** More than 30 blends and single-origin premium coffees.
- **Handcrafted Beverages:** Fresh-brewed coffee, hot and iced espresso beverages, teas, Starbucks Cold Brew, Frappuccino blended beverages, and Starbucks Refreshers® beverages.
- **Fresh Food:** Baked pastries, sandwiches, salads, protein boxes, oatmeal, yoghurt and snacks.

Consumer Products

- **Coffee and Tea:** Whole-bean and ground coffee, Starbucks VIA Instant, Starbucks Coffee K-Cup pods, Starbucks by Nespresso, Starbucks and Teavana Verismo pods.
- **Ready-to-Drink (RTD):** Starbucks bottled Frappuccino coffee drinks, Starbucks Discoveries chilled cup coffees, Starbucks Discoveries Iced Café Favourites, Starbucks Iced Coffee, Starbucks Doubleshot espresso drinks, Starbucks Doubleshot Energy Coffee drinks; Starbucks Bottled Cold Brew; Starbucks Refreshers beverages, and Teavana craft iced teas.

Starbucks believes in the pursuit of “doing good”

Starbucks has always claimed to have a positive impact on the communities it serves - one person, one cup and one neighbourhood at a time. It is this vision that it believes will elevate its partners, customers, suppliers and neighbours to create positive change in the areas where it can make the biggest impact.

Leading in sustainability: The company’s aspiration is to become resource positive, giving more than it takes from the planet by storing more carbon than it emits, eliminating waste, and providing more clean freshwater than it uses.

Strengthening communities: Starbucks seeks to be a welcoming Third Place for everyone while supporting the communities it impacts – from volunteering in local neighbourhoods to helping families in coffee- and tea-origin communities.

Creating opportunities: The coffee chain invests in pathways to opportunity through education, training and employment; hiring veterans and military spouses, refugees, Opportunity Youth and those formerly incarcerated, and helping them build their futures once they are with the company.”

CURRENT MARKETING ACTIVITIES

Starbucks uses a multi-channel marketing strategy in the Canadian market to interact with customers and increase sales. This comprises:

Advertising: To promote its goods and brand messages, Starbucks uses a variety of advertising channels, including internet platforms, social media, television, and outdoor advertising. Starbucks' dedication to sustainability, community involvement, and excellence is frequently highlighted in advertising efforts.

Promotion: To encourage recurring business and strengthen consumer loyalty, Starbucks regularly offers promotional deals and loyalty programs. Discounts, exclusive deals, or prizes for Starbucks prizes members are some components of these promotions.

Web Presence: Starbucks keeps a live online presence via its official website and mobile app, where users can place orders in advance, personalise their drinks, and take advantage of special discounts and incentives.

Newest Products: In order to satisfy customer demand, Starbucks constantly innovates its product lineup.

Performance in Canadian Market

Starbucks is well-represented in the Canadian market, with a large number of locations in both suburbs and big cities. Although exact sales numbers and market share information for Canada may differ, Starbucks is regularly ranked among the top coffee shop chains in the nation. Starbucks' premium positioning and high-quality offerings are reflected in the cost of its goods, which is generally in line with worldwide pricing standards in Canada.

Overall, Starbucks is still doing well in the Canadian market because it uses creative product offers, a strong brand equity, and customer-focused marketing techniques to hold onto its position as the go-to place for those who enjoy coffee and other beverages.

IDEA: STARBUCKS PROTEIN COFFEE

Starbucks Protein Coffee is a canned, shelf-stable, caffeinated cold coffee drink with 10 grams of added protein to support daily active living. It is a lightly sweetened functional beverage and includes ingredients to help the consumer feel confident in “crushing” their fitness goals. The functional ingredients are a complete protein source (10 grams of collagen peptides and tryptophan), an electrolyte blend (130 mg sodium, 2mg magnesium citrate, 30mg potassium monohydrate) to support hydration, as well as 150mg of caffeine from coffee.

Collagen was chosen over other protein sources to broaden SPC’s appeal for a few reasons. Importantly, it’s a rapidly absorbing protein to support muscle recovery. Additionally, it’s also completely plant-based/vegan and popularly known as being beneficial to the skin - both traits whey protein and other sources can’t claim. (Patel)

Starbucks Protein Coffee will launch nationwide in grocery stores in Q3 2024 alongside an awareness campaign partnering with GoodLife Fitness.

MARKET CATEGORY ANALYSIS

Product Category: The product category is ready-to-drink (RTD) protein shakes, packaged in cans, targeting health-conscious consumers looking for convenient and nutritious on-the-go options.

Target Audience: Starbucks will target a broad demographic, including fitness enthusiasts, busy professionals, and health-conscious individuals who frequent its stores or are attracted to the brand's image and convenience.

Market Size: The market for ready-to-drink (RTD) protein shakes is estimated to be worth billions of dollars globally. This estimate is based on increasing consumer awareness of health and wellness, along with a growing demand for convenient and nutritionally balanced products. Market research reports project continued growth in the RTD protein shake market over the coming years due to these factors, indicating a lucrative opportunity for businesses in this industry.

Market Trends and Growth: Trends driving growth in the RTD protein shake market include the rise of health-conscious lifestyles, increased demand for convenience, and a

growing preference for snacks and beverages that offer functional benefits, such as protein for muscle recovery and energy.

Competitive Landscape: Starbucks would enter a competitive market with established players such as Biosteel, Vega, Guru, Celsius, Flow Water among others. However, Starbucks can leverage its strong brand recognition, extensive distribution network, and loyal customer base to compete with them effectively.

COMPETITOR ANALYSIS

COMPETITOR 1: BioSteel

Product Offering: BioSteel offers a variety of sports nutrition products, including sports drinks, protein powders, and nutritional supplements.

Market Share: Remarkable market share in the sports nutrition category in Canada, particularly among athletes and fitness enthusiasts.

Product Positioning: Premium, science-backed formulations that enhance athletic performance and recovery.

Strategies:

Product Quality: Emphasises the use of high-quality ingredients and innovative formulations, catering to the needs of elite athletes.

Promotion: The brand collaborates with professional sports teams and athletes for endorsements and sponsorships, leveraging social media and influencer marketing for brand awareness.

Pricing: Priced at a premium compared to conventional sports drinks but is perceived as offering superior benefits.

Distribution: The products are widely available in retail stores, gyms, and online platforms, ensuring accessibility to consumers nationwide.

COMPETITOR 2: Vega

Product Offering: Vega specialises in plant-based nutrition products, including protein powders, shakes, and functional beverages.

Market Share: Strong presence in the plant-based nutrition category, catering to health-conscious consumers seeking vegan-friendly options.

Product Positioning: Positions its products as natural, plant-based alternatives to traditional supplements, appealing to environmentally conscious consumers.

Strategies:

Product Quality: Emphasises the use of organic, non-GMO ingredients, free from artificial additives or preservatives, aligning with consumer preferences for clean-label products.

Promotion: It engages in content marketing and educational campaigns to promote the benefits of plant-based nutrition, targeting both fitness enthusiasts and environmentally conscious consumers.

Pricing: Competitively priced within the plant-based nutrition category, offering value for consumers seeking premium quality.

Distribution: The products are available in health food stores, supermarkets, and online retailers, leveraging omnichannel distribution for broader market reach.

COMPETITOR 3: Celsius Fitness Drinks

Product Offering: Celsius Fitness Drinks offers a range of fitness-focused beverages designed to boost energy and support performance during workouts. Its products include carbonated and non-carbonated options, with flavours like sparkling orange and wild berry.

Market Share: Gained traction in the fitness and wellness community, appealing to active individuals seeking functional beverages that complement their active lifestyle.

Product Positioning: Positions its drinks as scientifically formulated to accelerate metabolism, burn body fat, and provide sustained energy. It targets fitness enthusiasts, athletes, and those looking for a healthier alternative to traditional energy drinks.

Strategies:

Product Quality: Contains no artificial preservatives, flavours, or colours. The drinks are made with a proprietary blend of ingredients, including green tea extract, guarana, and ginger root, known for their thermogenic properties and energy-boosting effects.

Promotion: Engages in targeted marketing campaigns aimed at fitness enthusiasts through partnerships with gyms, fitness events, and social media influencers. Celsius leverages endorsements from athletes and fitness professionals to build credibility and brand authenticity.

Pricing: Priced competitively within the functional beverage category, positioned as a premium alternative to conventional energy drinks and sports beverages.

Distribution: The products are available in various retail channels, including gyms, convenience stores, health food stores, and online platforms. The company focuses on maximising accessibility and visibility to reach its target market.

COMPARISON CHART:

Competitor	Product	Price (CAD)	Key Features
Bio Steel	Sports Drink	\$2.99	Electrolytes, amino acids, no artificial additives
Vega	Protein Shake	\$3.49	Plant-based protein, vitamins, minerals
Celsius	Fitness Drink	\$2.99	Thermogenic blend, sustained energy, no artificial colours/flavours

MARKET AND CONSUMER FACTORS

SOCIAL AND CULTURAL TRENDS

Hype Around Protein Consumption: Forty-six percent of Americans regularly use protein supplements to aid their fitness regimes. Protein is recommended to facilitate weight loss or gain muscle, resulting in “high-protein” claims on a lot of shelved foods and the rising perception of the macronutrient being an end-all-be-all for fitness (Wilson, 2019).

Caffeine Reliance for Boost: Caffeine is increasingly being seen as an enhancer, especially when consumed an hour before workouts. (Gonsalves, 2017). Canada is the third-highest consumer of brewed coffee in the world, and Canadians have an average of 1.5 cups of coffee per day, indicating that the drink is a good way to deliver supplements (Harris, 2016; O'Donohoe, 2023).

Experimentation with Coffee and Social Media Trends: The shut-downs during the COVID-19 pandemic engendered several trends on social media, like the whipped Dalgona coffee, keto coffee, the “profee” (protein-supplemented coffee) craze on TikTok, and even the addition of collagen powder to drinks. Those keeping up with these tend to order custom coffee drinks simply because they heard about it on social media or because of the way they look.

Rise of Plant-Based Consumption and Environmental Consciousness: The appetite for plant-based foods is growing rapidly, with the market forecast to reach \$42.55 billion by 2034 (Yahoo Finance, 2014). This is a result of not only the rising lactose intolerance among consumers, but also a desire to reduce one's carbon footprint and the perceived health advantages from going vegan.

DEMOGRAPHIC TRENDS

Big spenders: Coffee drinkers in Canada tend to spend an average \$35.21 per month on the beverage; the highest spenders are British Columbia, Ontario, and Alberta, making these markets the biggest opportunities for any coffee chains (O'Donohoe, 2023).

Trends in Dietary Supplements: The urge to experiment with protein supplements begins in high school itself, with nearly 40% of high-school boys reporting using protein powders or shakes (Lewis, 2020). The usage of dietary supplements is common among older, educated Canadian women, according to studies (Keshavarz et. al, 2021).

Coffee Consumption Trends: Millennials drink the most amount of coffee, with coffee consumption among the 18 to 24-year-olds growing faster than any other age bracket (Rapier, 2017). This group also tends to get their coffee away from home, and prefers cold brew (Coffee Association of Canada).

The high-income group has the largest share of coffee drinkers at 35.98%. Women and those with higher education levels and incomes tend to turn to restaurants to get their coffee as opposed to convenience stores (Rehm et al., 2020).

Plant-based Lifestyle trends: Plant-based diets are more popular among urban consumers aged between 18 and 44 years; in Canada, mostly those aged 18-29 follow a vegetarian, vegan, or pescetarian diet (Rees, 2021). This age group is also more likely to try out innovations in food that bring them a step closer to ethical consumption.

EXTERNAL ENVIRONMENTAL FACTORS

ECONOMIC FACTORS

Global Recession: Living expenses and food inflation are rising throughout Canada, resulting in lower consumer spend and a steep decline in retail food sales (Bakx, 2024). With a recession looming, 62% Canadians claim to be eating out less while 46% reveal switching to cheaper brands (Galler, 2022).

Rise of Retail Coffee Prices: The cumulative effect of droughts in Brazil and Colombia - primarily importers of coffee in Canada - and the pandemic-led snags in shipping led to coffee prices shooting up to their highest levels in years (Kost, 2022).

POLITICAL

The Impact of Geopolitical Conflicts: Starbucks, and other big brands, have been subjected to boycott calls surrounding the Israel-Palestine conflict, because of their perceived stance. The coffee chain saw slower sales in the first month of 2024; any further negative publicity would adversely impact sales, profits, and product launches (Tenbarger, 2023).

Ethically Sourced Raw Materials: Around 71% of Canadians wish to know the origins of their food, while just as many claim to shop at retailers that follow strong sustainability and ethical practices. (Deloitte) With Colombia and Brazil being the biggest importers of coffee to Canada, it will be important to ensure the beans are ethically sourced (Ridder, 2024).

LEGAL

Norms around Caffeine Content: The Canadian government has capped the amount of caffeine from all sources to a total of 180 mg per serving of a caffeinated energy drink, and the country's Food and Drug Regulations also have limits on other supplements (Health Canada, 2024).

Marketing Norms for CEDs: Caffeinated Energy Drinks can't be marketed as an electrolyte replacement during sports performance since the presence of caffeine tends to hide the signs of dehydration (Health Canada, 2013).

ANALYSIS OF CUSTOMERS: TARGET MARKET (CURRENT AND POTENTIAL)

CURRENT MARKET

According to Carmely (2022), Starbucks customers fall into the 22-60 age group, both male and female who live in both urban and suburban areas. They are typically middle and upper class, well educated, socially aware, and maintain an active lifestyle. Carmely also notes that Starbucks customers are loyal and often develop a habit of visiting the store on a very regular basis; at least once a day. The current Starbucks market consists of busy achievers, and explorers, with a budget to spend. They are health conscious, socially aware, and care about the environment (Carmely, 2022).

POTENTIAL TARGET MARKET

There are two potential target market groups which Starbucks should focus on marketing to: their current customer base as well as 'health and wellness motivated individuals' (*detailed information on this target group can be found below in the Segment Chart and Customer Profile*).

As previously described, the current Starbucks customer base includes individuals who are health conscious, socially aware, and often prefer to maintain active lifestyles (Carmely, 2022); all of which are traits of an individual who would be interested in a health oriented caffeinated protein drink for on-the-go purposes. Additionally, it is noted that Starbucks maintains a very strong brand relationship with their current customers; these individuals display a strong sense of brand loyalty and when presented with a choice, are much more likely to choose Starbucks products over any other brand. Thus, they are likely to try out any new and innovative product that Starbucks launches, such as the Starbucks Protein Coffee.

As for the second target group, Starbucks should focus on targeting 'health and wellness motivated individuals.' These individuals are both male and females anywhere from 20-34 years old. These individuals thrive off of living a fast-paced and busy life oriented around health and wellness. They are passionate about experiencing life to the fullest and share a common openness towards trying new things. The product we are suggesting would fit seamlessly into the lives of these individuals. With thoughtful product distribution and placement as well as targeted marketing campaigns, this product has the potential to be a huge success with this group, ultimately resulting in increased sales and brand awareness.

SEGMENT CHART

Major Segmentation Variables	Minor Segmentation Variables
Geographic	World Region: North America Density: Both Urban and Suburban
Demographic	Age: 20-34 Gender: Male, Female

Psychographic	Lifestyle: Achievers, experiencers Personality/self-concept: health and fitness-conscious
Behavioural	Benefits: Quality, Convenience User-status: First-time user Loyalty status: Strong Readiness stage: Informed and interested Attitude toward product: Enthusiastic
Segmentation Profile Name:	Health conscious and wellness enthusiasts
Description:	20-34 year olds, male and females who thrive off of living a fast paced and busy life oriented around health and wellness. They are passionate about experiencing life to the fullest and share a common openness towards trying new things. They are on the search for a convenient caffeinated beverage that is health conscious and is intended for fitness related use (i.e.. protein or electrolytes)

CONSUMER PROFILE

Name: Alissa Rayner

Description:

Young professional working as a social media manager for Azur Fit, an athleisure wear company based in Toronto. Alyssa is a single female living in a condo downtown. In her free time, she enjoys playing tennis, taking her dog for walks, testing out new fitness classes in the city, and catching up with her friends over coffee and smoothies.

Key Demographics

- **Age:** 25
- **Location:** Toronto, ON (Urban)
- **Education:** BA degree in Professional Communication at Toronto Metropolitan University
- **Profession:** 9-5 pm office job as a Social Media Manager for an athleisure wear company

Key Psychographics

- Enjoys outdoor activities including tennis and taking her dog for walks
- Is always on the hunt for new gym's around the city
- Often goes out for coffee and smoothies daily, before and after her workouts
- Has experience in marketing and sales and is drawn to brand's who offer innovative products and services

- Value's clean and healthy ingredients and is willing to pay more in return for quality
- Typically leans towards products that feature aesthetic and clean packaging

Pain Points/Opportunities

- Avoids brands who come across as disingenuous and untrustworthy
- Dislikes tackiness
- Strongly avoids purchasing food items or beverages that contain artificial ingredients
- Will avoid purchasing products that get negative feedback on social media, particularly Tik Tok and Instagram

SWOT ANALYSIS

Strengths ● High brand recognition ● Known for innovation ● Known for high quality coffee ● Known for social responsibility: aluminium cans easily recyclable in most regions ● Pre-existing distribution network in cafes and grocery ● Loyal customers	Weaknesses ● Consumer skepticism: both coffee lovers and fitness addicts are passionate consumers ● Consumer confusion about ingredients and benefits ● Brand dilution if the product is seen as low quality ● Starbucks' price points are premium
Opportunities ● Expand customer base to new segments ● Create new occasions for consumption: breakfast, pre/post/mid-fitness ● Seasonal flavours to match cafe offerings (ex: PSL, brown sugar) ● Competitor drinks are often very high in sugar ● Partnerships with sport/fitness orgs, brands, influencers, gyms ● Some consumers already familiar with 'proffee' (protein coffee) idea from social media (Tibbits) (Copeland) ● Product hits many growing markets: coffee, ready-to-drink coffee, functional beverages, protein and plant-based protein, according to 2023 Statista reports (see appendix)	Threats ● Competitors on the shelf include huge energy drink brands ● Many substitutes in sport nutrition and coffee; strong differentiation needed to convince consumers of value ● Supply chain issues could increase cost of coffee ● Macroeconomic factors: Recession could reduce consumer RTD spending ● Changing government regulation on active ingredients like caffeine

PRODUCT/PRICING STRATEGY

POSITIONING STRATEGY

The product will be launched using lifestyle positioning as the positioning strategy since it speaks to the core reason why Starbucks is creating a coffee beverage with functional benefits to enhance exercise performance and daily active life.

Why not Product Differentiation?

Product differentiation would have involved focusing on the core ingredients of the beverage - protein, electrolytes, collagen etc. This fails to position the product in a positive light. Moreover, highlighting that it's an "exercise performance coffee" wouldn't help the audience create a visual in their mind.

Why Lifestyle Positioning?

The whole purpose behind creating 'a coffee beverage with functional benefits to enhance exercise performance and daily active life' is to attract customers that may not see Starbucks as a healthy option. Starbucks drinks often have a lot of sugar, which is the opposite of healthy eating and drinking.

The company wants to start associating its brand image with healthy and active living; marketing to their current customer base in conjunction with health and wellness focused individuals is a step in that direction.

BRAND NAME AND RATIONALE

"Starbucks Protein Coffee"

The idea behind the name is to keep things simple. Starbucks already has a strong brand; it seems reasonable to keep "Starbucks" as the focus of the product name. Customers shopping in the health drinks section will gravitate towards Starbucks over other brand names, if the company chooses to highlight that it's a Starbucks offering.

PACKAGING AND MOCK-UP

See appendix.

PRICE POINT

The drink will be priced at \$4.99. Competitors typically charge about \$4 a can. While these prices are slightly more expensive than competitor products, Starbucks' premium brand image means it can charge slightly extra, and consumers will pay for the Starbucks brand. Since Starbucks will be selling individual cans, it will be able to justify charging a little extra.

COMPARISON WITH COMPETITORS AND RATIONALE BEHIND PRICING

The health space is a new market for Starbucks. When approaching a new market, it's important to be cautious about overpricing. Anything over \$7 or 8 would be far too much for a singular coffee can despite its added nutrients and given the competitive landscape.

Meanwhile, the health-based drink market is on the rise. Companies like Athletic Greens are growing extremely quickly - at a premium price of over \$100/bag. The target demographic for health based drinks is middle class, upper middle class and higher, so it's important to also price the product too low.

That being said, if competitive products are being priced around the \$4 range, Starbucks can't deviate too far from the competition. Customers will pay \$1-2 extra for the brand, but not too much more.

Lastly, it's important to look at Starbucks' price points for their other consumer packaged drink products. The "Starbucks Doubleshot Energy Espresso Coffee White Chocolate" canned drink retails between \$3.79 and \$4.49. The "Starbucks Frappuccino Iced Coffee Drink Vanilla" is priced exactly the same. Despite being different drinks, Starbucks purposely chooses to price them the same to strategically compete with other brands on the shelves. The same strategy will be followed for Starbucks Protein Coffee.

It's also important to note that a protein coffee doesn't compete with a double shot energy drink or an iced frappuccino. Consumers buy each drink for different reasons. The SPC must be priced competitively, and stand out for its coffee/protein positioning.

CREATIVE BRIEF

Client: Starbucks	Date: 21 February 2024
Assignment: "It's Your Move"	Client Signed By: Brady Brewer, CMO
Briefed By: Vrinda Gupta, Swati Khanna, Khushi Patel, Josh Parto, Jenna Rosati, Kush Yegnaswami	Due: 21 April 2024

PROJECT DESCRIPTION/BACKGROUND INFORMATION

For many individuals, the idea of working out can be overwhelming at first, especially outside of the home in a public setting. It has been found that approximately 40% of Canadians are intimidated to work out in a gym (Simpson, 2016). 38% of these individuals avoid exercising in public because they are nervous that people are going to be watching and judging them and 33% say they don't know what they're doing or where to start (Simpson, 2016). Based on this information, it seems clear that Canadians are finding it difficult to find the motivation to be active.

Starbucks will launch a campaign called ‘It’s Your Move’ where ad spots will be run, highlighting a motivational event where passersby’s share words of encouragement to get active on the wall of a downtown Toronto GoodLife Fitness gym. Phrases like “*you got this!*”, “*you’re not alone!*”, “*one day at a time!*”, “*unleash your potential*”, “*be unstoppable*”, “*embrace the energy*” fill the wall on colourful sticky notes, resulting in a rainbow of motivation. These messages will be mirrored on can packaging and in GoodLife gyms across Canada, to position Starbucks Protein Coffee as an accessible functional coffee drink made for all kinds of active moments.

WHAT ARE THE COMMUNICATIONS OBJECTIVES?

Increase awareness of Starbucks Protein Coffee to 30% of the target demographic of Canadian adults aged 20-34 by the end of Q3 2024, by launching an awareness ad campaign in partnership with GoodLife Fitness, positioning the beverage as an accessible drink that makes any active moment more rewarding, and running surveys before and after.

Specific: Increase awareness of Starbucks Protein Coffee to 30% of the target demographic of Canadian adults aged 20-34

Measurable: Increase awareness to 30% of the target audience, compared to before the awareness ad campaign, by running surveys.

Achievable: Demonstrate how SPC fits into an active daily lifestyle with an awareness campaign and measuring product awareness before and after it.

Relevant: Launching a new product requires awareness and partnering with GoodLife supports quickly creating that awareness with consumers in various stages of active lifestyles.

Time-bound: Increase awareness to 30% by the end of Q3 2024.

Increase social mentions and search traffic of Starbucks Protein Coffee by 50% by the end of Q3 2024 through an awareness campaign and encouraging consumers to engage with the “#ItsYourMove” hashtag as a way to brag about small ways they stay active, while helping others do the same.

Specific: Increase social mentions and search traffic of Starbucks Protein Coffee by 50% by the end of Q3 2024

Measurable: Increase social mentions and search traffic of Starbucks Protein Coffee by 50% by the end of Q3 2024, by using Google Trends and social listening tools to track engagement.

Achievable: Engage consumers so they share how SPC fits into their active daily lifestyle with an awareness campaign and measuring social mentions and search traffic before and after it.

Relevant: Launching a new product requires awareness and activating Starbucks' fanbase and everyday people with a social trend supports quickly creating that awareness with consumers in various stages of active lifestyles.

Time-bound: Increase social mentions and search traffic by 50% by the end of Q3 2024.

WHO IS THE TARGET AUDIENCE?

The target audience for the Starbucks 'It's Your Move' Campaign includes Canadian adults aged 20-34. These individuals have aspirations of developing and maintaining a more active lifestyle; they might not know where to start or feel nervous about potentially embarrassing themselves in the case that they look like they don't know what they are doing to others. This group is looking for motivation and a sense of inclusion so that they can feel more comfortable and excited about the idea of beginning their fitness journey.

WHAT IS THE CONSUMER INSIGHT?

"I'm too tired and don't feel inspired to get active. If only there was a drink that could give me the motivation to go work out."

WHAT IS THE BENEFIT WE ARE TRYING TO COMMUNICATE?

The benefit that the campaign is trying to achieve is to position Starbucks Protein Coffee as an accessible and motivating beverage that seamlessly integrates into an active lifestyle. By encouraging consumers to engage with the campaign and share their active moments using the hashtag #ItsYourMove, the brand aims to foster a sense of community and empowerment, ultimately driving awareness and usage of Starbucks Protein Coffee. The campaign seeks to address the barriers to exercise identified in the background information by providing motivation and support to individuals who may feel intimidated or unsure about working out.

WHAT CAN WE OFFER AS SUPPORT FOR THIS?

A canned cold coffee drink with 10 grams of protein provides a solution to those who need a boost of energy, but also need to hit their protein goals for the day.

Being tired is inherently tied to lacking motivation. When people drink coffee, in addition to defeating their drowsiness, they also hope to gain some motivation to get to work. That's why addressing the issue of motivation with going to the gym is the perfect messaging tactic to use for this product.

Starbucks is supporting those who want to start going to the gym by saying that "a coffee protein drink is exactly what you need to get in the mood for exercising"... "a little bit of protein to give you the strength to perform better at the gym, and a whole lot of energy from the coffee to give you the motivation to get your butt in the gym"!

WHAT IS THE BRAND'S CREATIVE STRATEGY/CAMPAIGN THEME?

The brand's creative strategy is to inspire and empower individuals to embrace an active lifestyle while positioning Starbucks Protein Coffee as a supportive companion. The

campaign theme, "It's Your Move," encourages overcoming exercise barriers and fosters a sense of community through uplifting messages and social engagement.

Appeal Technique(s) / In this campaign, we're using emotional appeal to inspire individuals to overcome exercise barriers and feel empowered in their fitness journey. Social appeal encourages participation and community-building through hashtags like #ItsYourMove, fostering connections among consumers. Lastly, inspirational appeal showcases real-life examples of individuals achieving their fitness goals with Starbucks Protein Coffee, motivating others to do the same.

Creative Tactic(s) / The creative tactics include showcasing relatable situations where individuals receive encouragement to be active, both in physical spaces like the GoodLife Fitness gym and through social media engagement with the #ItsYourMove hashtag. By integrating motivational messages into the campaign's physical and digital elements, Starbucks effectively reinforces its brand message and encourages consumer participation.

WHAT'S REQUIRED / MANDATORIES/ EXECUTIONAL CONSIDERATIONS?

The experiential marketing campaign will launch in partnership with GoodLife Fitness, and feature a Wall of Motivation where people can stick notes encouraging other gym goers—or those deliberating whether or not to go in—that they've got this. The location chosen for the campaign must have a high footfall and must have a Starbucks location near it.

The event will be recorded and used to produce the main creative—a pan-Canada 60-second spot on TV. Thirty- and fifteen-second cut downs will be used for content on social media platforms and, along with being repurposed for OOH displays and ads on social media.

The budget for the event, ad production and broadcast rates in this financial quarter will be CAD500,000; CAD 200,000 of this will be used towards the event and the video production.

Instead of doggedly telling people they should push themselves to achieve their fitness goals, the commercial should be a refreshing reminder that it is okay to lack motivation. The campaign should centre solely on positive affirmations and stay away from any diet-centric messaging.

The messages participants write on the walls will be used in display ads and OOH home creatives that follow.

During the event, the participants will not be asked to sample any Starbucks products. To ensure a branded experience, the wall, sticky notes, and any other materials on display in the ad will feature the company's logo and the hashtag associated with it.

The end of the ad should feature the hashtag #ItsYourMove, with a CTA asking people to visit various Starbucks social media pages and post their own stories with their motivational messages.
